### Manual Operation

- **Lowering Lift:** Press LOWER arrow on control unit
- **Raising Lift:** Press RAISE arrow on control unit
- **To Hold:** Press either RAISE or LOWER arrows when lift reaches desired position  
**OR** press *STOP* button on remote

**Programming key fobs:** Hold REMOTE PROGRAM button on control board and STOP button on remote together for 5 seconds or until green light blinks rapidly

*\*To clear all remotes programmed to control unit hold REMOTE PROGRAM button for 15 seconds*

**Syncing Phone App:** Download "Captain's Choice" app on smart phone

Open app and press Bluetooth button on control unit, Default PIN: 654321 to connect.

Once connected change PIN # in settings and phone will sync to control unit when in range.

## Remote Operation

- **Lowering Lift:** Press down arrow (top left button), strobe light will activate
- **Raising Lift:** Press up arrow (top right), strobe light will activate
- **To Hold:** Press *STOP* button on remote  
OR press up or down arrow on control unit

\*The :30 (seconds), :1:00 (minute) and 1:30 buttons will activate the **RAISE** function for that amount of time to raise lift to a floating position.

\*\*\* *Green light on center of remote will blink rapidly when system makes connection with control unit*

## Remote Transmitter

The Captain's Choice remote uses Bluetooth to transmit its signal and has a range of 500+ feet depending on the conditions.

It is recommended to keep the remote(s) in a safe place to avoid false triggering. Remotes will typically work from the home or condo so care should be taken if stored in the home.

Your remote transmitter is water tight but caution should be used around the water. A lanyard around your neck is recommended to avoid dropping in the water and false triggering when placed into pockets.

If LED fails to light up on center of remote it is likely the remote will need the battery replaced. To replace battery, remove 4 screws from back cover and open casing. The Captain's Choice remote uses a 3 Volt DC battery, model number CR2032. This battery can be found in most stores that sell consumer electronics.

## Maintenance and Tips on Use

### Winter Storage

It is not necessary to unplug the Captain's Choice when left unattended. False triggering from another remote device is not likely. However, During the winter or when away for an extended period of time it's a good idea to unplug your system. This will help prevent damage from lightning or other unforeseen conditions.

### GFCI Cord

The Captain's Choice is equipped with a built in GFCI safety circuit to help prevent from voltage fluctuations that are common on boat docks. Occasionally the Captain's Choice might receive a large enough voltage fluctuation to trip the safety circuit. The GFCI is built in the power cord near the outlet. If the light on the GFCI cord is RED hit the top button to reset the GFCI to restore power.

### Indicator Strobe

The Captain's Choice remote system is equipped with an LED strobe light mounted on the nearest dock post. The strobe light will flash during manual and remote operation to notify you that the lift is either raising or lowering. There is no bulb so the whole housing must be replaced when burnt out. It is NOT recommended to extend strobe wire any further than the nearest post to where the control unit is mounted.

### Caution: Never operate your lift when not in view.

With a range of 500+ feet it is possible for the lift to get triggered from inside of a house or condo leading the owner to believe the system has malfunctioned. It is a good idea to keep the transmitter in a safe place when not in use to avoid false triggering.

### Operation

When raising the boat lift with no boat on it, allow the tanks to just break the surface of the water. This will remove stress on both your dock and lift. This will also minimize the time it takes for the lift to drop when you return.

\*If the lift is raised too high with no boat it will take a long time to drop with no weight to help force the air out of the lift.

NOTE: In rough water the waves can cause the water in the tank to fill up the hoses with water and create an air lock. With no boat on the lift, it will cause the lift to not lower. To correct this turn on the raise function of the lift for 10-15 seconds to clear the hoses of any water. Once cleared the lift will drop.

## Blower Motors and Power Requirements

The Captain's Choice system is equipped with a high quality two stage blower motor(s) to raise the lift. These motors will pull around 15 amps while running. With this high-power draw, each motor in your control unit will have an independent power cord to handle the draw. If your system is equipped with more than one motor and cord then the plugs need separated into different circuits. It is recommended each motor be powered by its own 20-amp circuit.

### Models

MODEL	# of valves	# of blowers	power draw	# of cords	Lift Size
<b>SVSB</b>	1	1	15 amps	1	PWC - 6,000
<b>DVSB</b>	2	1	15 amps	1	6,000 - 10,000
<b>DVDB</b>	2	2	30 amps	2	8,000 - 18,000
<b>3VDB</b>	3	2	30 amps	2	14,000 - 24,000
<b>4V2B</b>	4	2	30 amps	2	18,000 - 30,000
<b>4V4B</b>	4	4	60 amps	Custom	21,000 +

Note: Each blower/cord requires its own 20-amp breaker to operate properly

## 2-Year Warranty

1. Captain's Choice warrants to the original Consumer/Purchaser that the enclosed product is free from defects in material and workmanship, and should this product be proven defective in materials or workmanship during a 2-year period in the hoist in which it was originally installed, Captain's Choice shall repair or replace the system or any part that Captain's Choice agrees is defective, without charge, during the first two years.
